

FIG. 1

FIG. 2 is a block diagram of a base station 110. The base station 110 includes an antenna 118, a base station processor 112, a base station memory 114, and a data port 120. The antenna 118 is connected to the base station processor 112. The base station processor 112 is connected to the base station memory 114. The base station memory 114 is connected to the data port 120. The data port 120 is connected to a network 116.

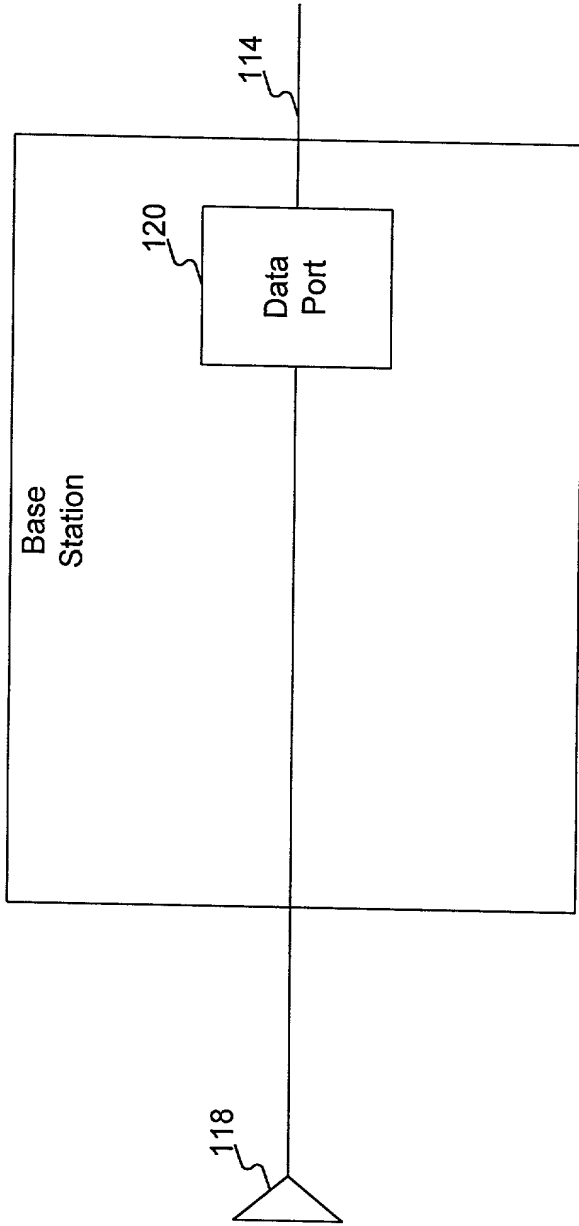

FIG. 2

FIG. 3 is a block diagram of a system 100. The system 100 includes an antenna 204, a receiver 208, a transmitter 209, a processing system 210, and a user interface 214. The processing system 210 includes a processor 210 and memory 212. The memory 212 includes a name/number database 222 and a synchronization routine 224.

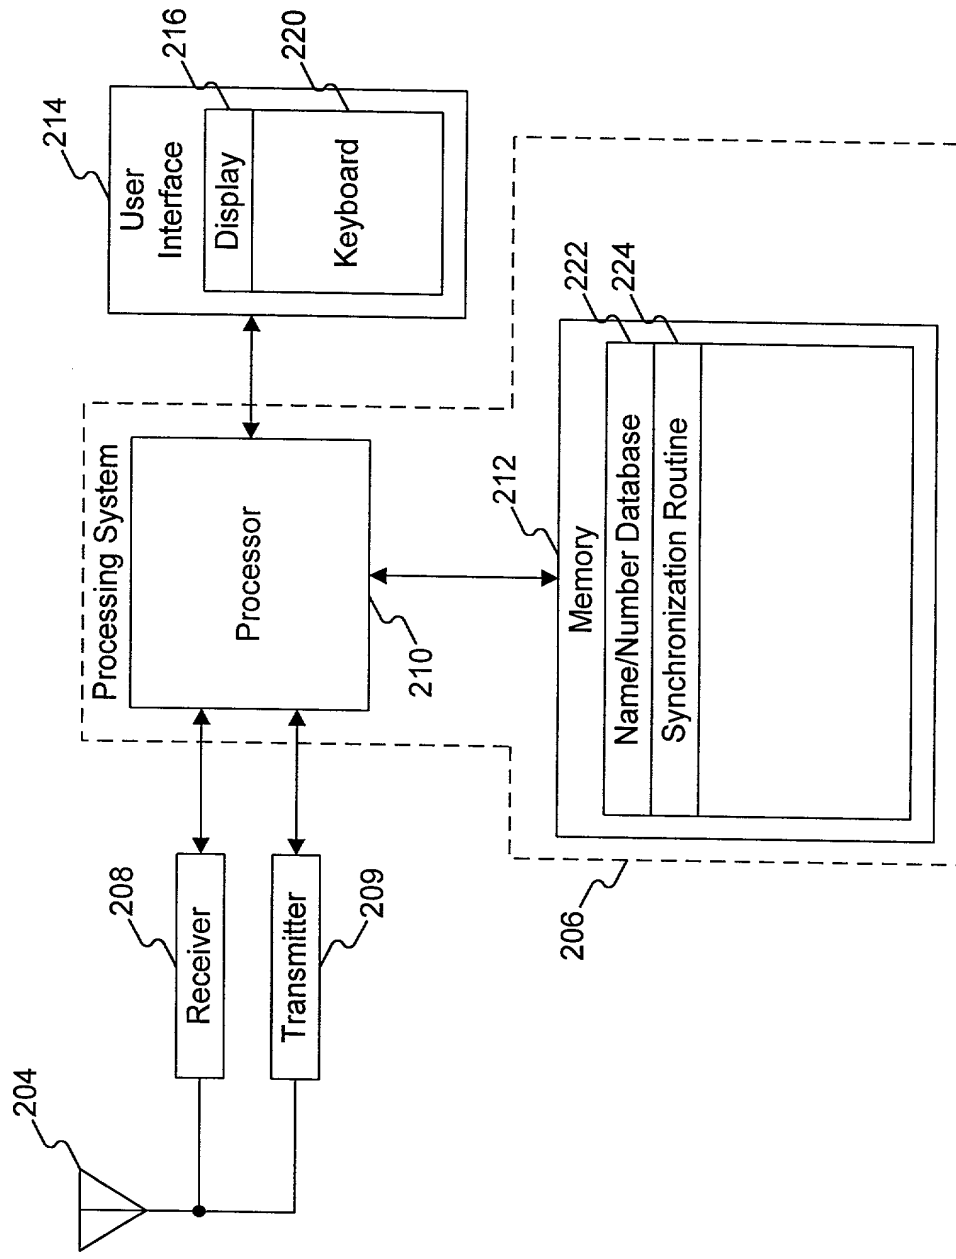

FIG. 3

FIG. 4 is a block diagram of a system 100. The system 100 includes a network interface 101, a base station interface 114, a processing system 310, and a mass medium 320. The network interface 101 is connected to the processing system 310 via a network interface 318. The base station interface 114 is connected to the processing system 310 via a base station interface 304. The processing system 310 includes a computer 312 and a mass medium 320. The mass medium 320 includes a subscriber database 322, a message processing element 324, and a synchronization routine 324.

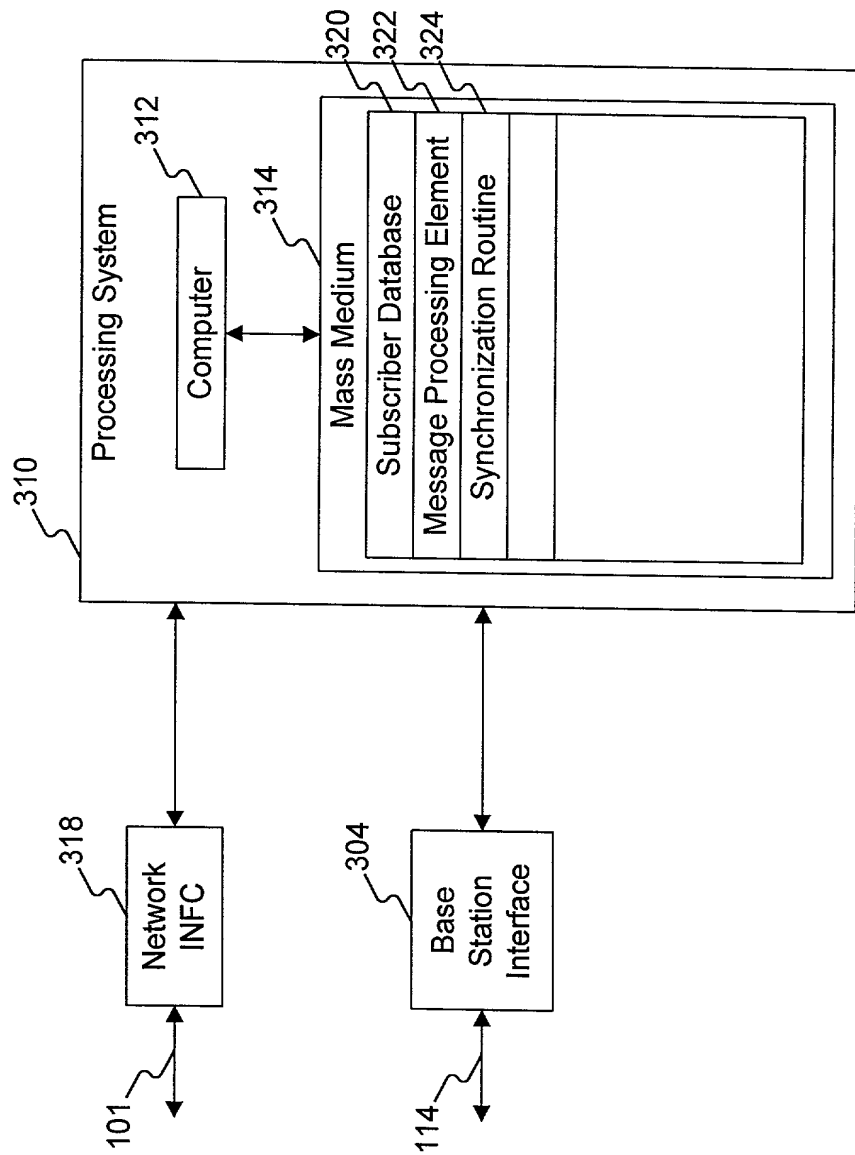

FIG. 4

Customer/Transponder ID Number	IP Address For Corresponding Computer	Contact Database	
		Name 1	Number 1
		Name 2	Number 2
		Name 3	Number 3
		Name 4	Number 4
		Name 5	Number 5

FIG. 5

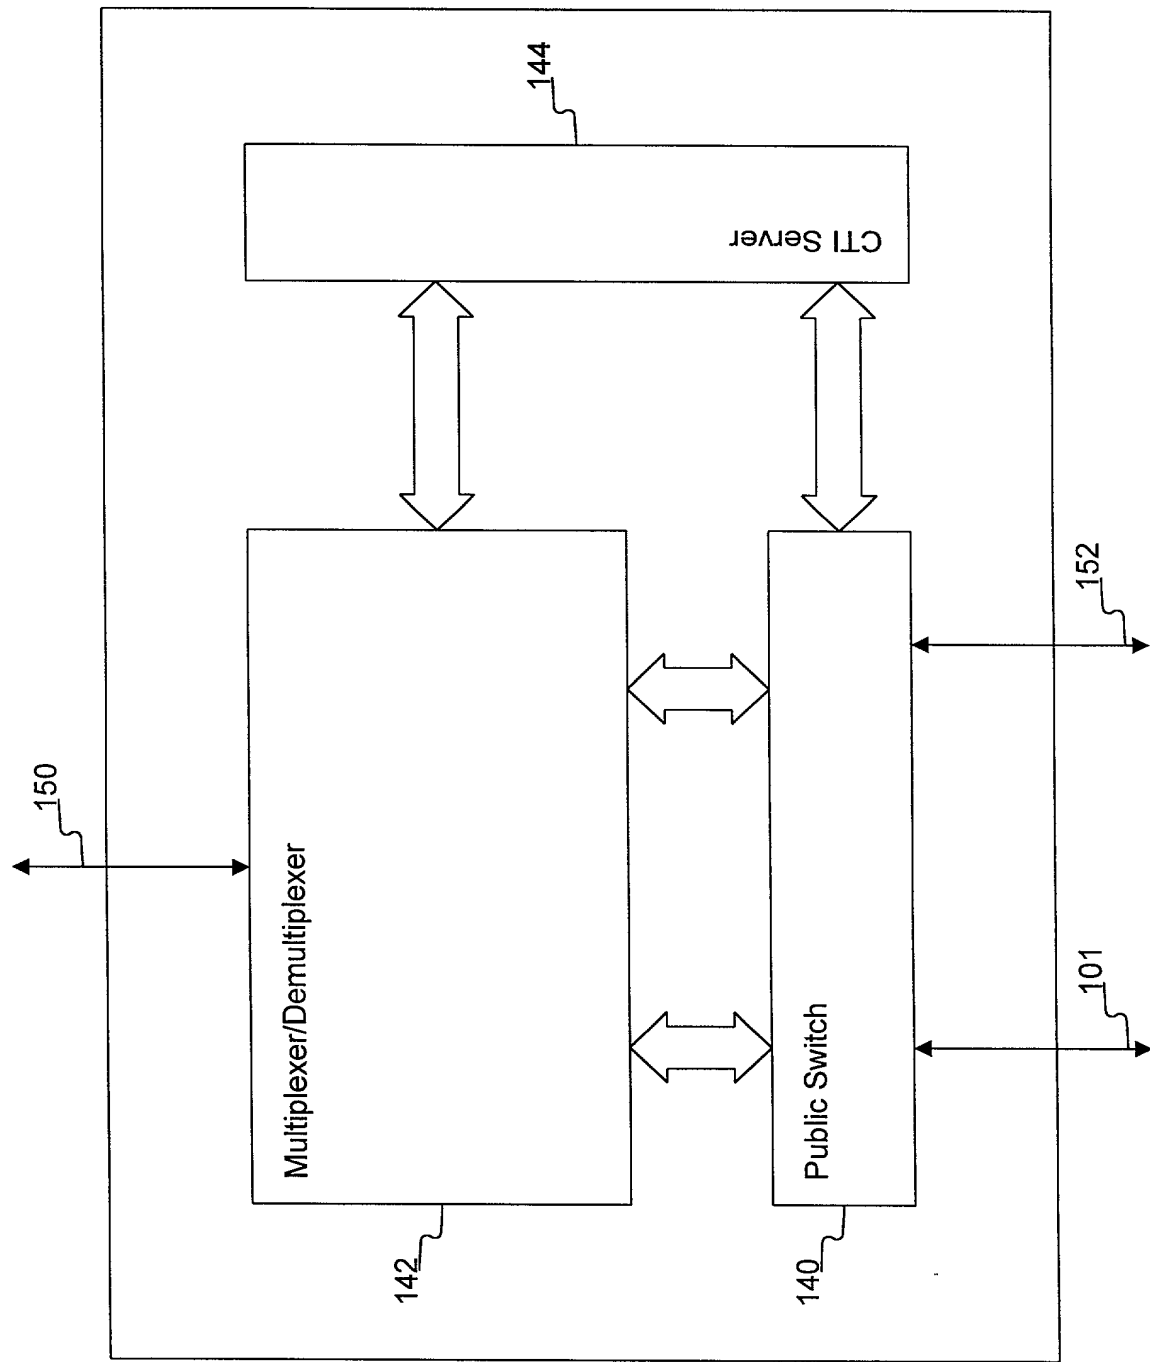

Fig. 6

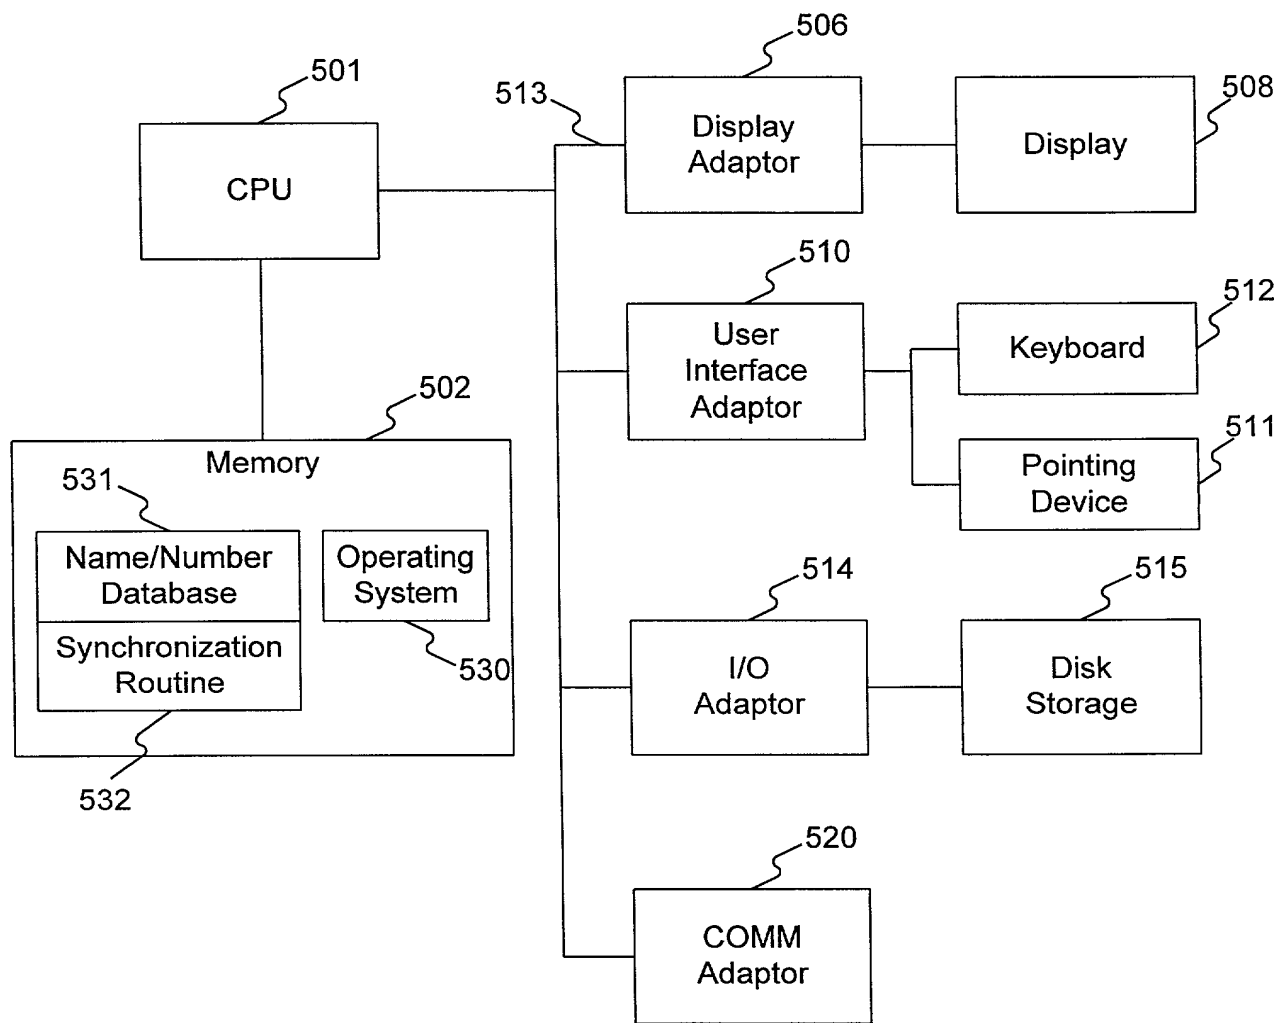

FIG. 7

FIG. 8 is a block diagram of a network packet structure 600. The packet structure 600 includes a physical layer header 610, a data link layer header 608, an IP layer header 606, a TCP layer header 604, and customer data 602. The physical layer header 610 includes a destination address 612 and a source address 614. The data link layer header 608 includes a destination port 616 and a source type 620.
